GQZ bearings wholesale customizations forklift roller bearings

Whether you call them forklift mast guide rollers, forklift roller bearings, or mast guide bearings, these bearings are designed for heavy load carrying capacities and high intermittent shock loads, such as those in forklift applications.

The internal design of mast guide bearings and other varieties of track roller bearings maximizes load capacities to protect bearing components and applications from high radial and thrust loads. Tight seals and high grease-fills are used to ensure minimal wear and tear and the highest possible lifespan for the bearing components.

The main features of forklift truck bearings include high load carrying capacity, easy to replace and maintain, long term effective lubrication, good self-lubricating performance, good wear resistance, good corrosion resistance.

High load carrying capacity: forklift truck bearings can withstand large dynamic and static loads, suitable for high dynamic and static loads of forklift truck operating environment.

Easy to replace and maintain: the parts of forklift truck bearings are highly replaceable, so it is convenient to replace the damaged parts without disassembling the whole bearing.

Long-term effective lubrication: the bearings are sealed structure, filled with grease, providing long-term effective lubrication, reducing the user's maintenance costs.

Good self-lubricating performance: the composite roller bearings are lined with PTFE and other self-lubricating materials, which can work continuously for a long time at room temperature and do not require additional lubrication.

Good wear resistance: synthesized from a variety of wear-resistant materials, they have excellent wear resistance and long service life.

Good corrosion resistance: due to the excellent corrosion resistance of PTFE and other materials, the composite roller bearings have good corrosion resistance, especially in acid and alkali environments is

more significant.

These features make the forklift bearings able to operate stably in various harsh working environments, while reducing maintenance costs and improving working efficiency and service life.
